Frequently Asked Questions

LEVITON

FREQUENTLY ASKED QUESTIONS

1. What are the requirements for receptacles in General Care Patient Bed Locations?

- NEC Article 517.18 (B)

- ✓ Must be hospital grade and have a permanent means of identification.
- ✓ Must have a minimum of four receptacle outlets.

2. What are the requirements for receptacles in Pediatric Locations?

- NEC Article 517.18 (C)

- ✓ Must be hospital grade and have a permanent means of identification.
- ✓ Must be listed as Tamper-Resistant.

3. What are the requirements for receptacles in Critical Care Patient Bed locations?

- NEC Article 517.19 (B)(1)

- ✓ Must be identified as hospital grade with a permanent indicator.
- ✓ Must have a minimum of six receptacle outlets.

4. True or False: Receptacles supplied by the emergency power system shall have distinctive color or marking as to be readily identifiable.

True.

- NEC Article 517.41 (E) and NFPA 99, 3-5.2.2.4

- ✓ Requires receptacles on the emergency circuit to be readily identified.
- ✓ Device color or wallplate ID.

5. What are the requirements for receptacles and fixed equipment installed in wet locations?

- NEC Article 517.20 (A)

- ✓ All receptacles and fixed equipment within the area of the wet location shall have ground-fault circuit-interrupter protection for personnel if interruption under fault conditions can be tolerated. If served by an isolated power system, ground fault circuit interrupter protection is not required.
- ✓ GFCI protection is not required for receptacles installed in critical care areas where the toilet and basin are installed within the patient room.

6. What are the testing and maintenance requirements for electrical receptacles in health care facilities?

- NFPA 99, Chapter 3-3 Section 3-3.3.3

- ✓ Visual integrity, ground continuity, polarity and ground blade retention force.
- Chapter 3-3 Section 3-3.4.2.3
- ✓ Testing shall be performed after initial installation, replacement or servicing. Additional testing shall be performed at intervals defined by documented performance data.

Exception: Receptacles not listed as hospital grade shall be tested at intervals not exceeding 12 months.

7. How does a surge protector work?

- A Surge Protector, sometimes called a TVSS (transient voltage surge suppressor), diverts surge currents away from equipment by creating a low impedance path to ground.

8. How do surges enter a building?

- Surges enter a system in two ways:

- ✓ Conducted (Directly On Lines Entering or Leaving a System)
- ✓ Radiated (Indirectly Via Electro-magnetic Fields)

9. What is IEEE C62.41?

- The Institute of Electrical and Electronic Engineers developed C62.41 59 to define surge environments. It doesn't represent a performance test. The standard amplitudes and wave forms are the basis for testing surge receptacles.

10. Does the NEC cover installation of Transient Voltage Surge Suppressors?

- Yes. NEC Article 285 TVSS Protection covers short circuit rating, installation and connection of TVSS or Surge Protection panels.

11. What are the three basic types of occupancy sensor technologies?

- Passive Infrared (PIR) "Line-of-sight" device that responds to infrared changes in a workspace.
- Ultrasonic device transmitting ultrasonic frequencies (32kHz-40kHz) and monitoring workspace changes. "Line-of-sight not required."
- Multi-Technology devices combine PIR and Ultrasonic technologies to control workplace lighting loads.

12. Can occupancy sensors save energy and reduce power bills?

- Yes. Since lighting accounts for 50% of the electricity usage in a typical commercial or institutional facility, turning those loads off when not required can significantly reduce energy costs.

13. Are adjustments required to make sure the lights do not go off while the workspace is occupied?

- Most commercial grade occupancy sensors are self-adjusting. After initial installation, the device monitors occupancy patterns. It automatically compensates for 'real-time' usage and sets itself accordingly.

Health Care Product Types

Testing For Hospital Grade Listing Of Plugs, Connectors, and Receptacles Includes:

500 lb. Crush Test

A wired plug or connector is placed between two steel plates and subjected to a force which is steadily increased to 500 pounds. "There shall be no breakage, deformation or other effect that may interfere with the function of the device."

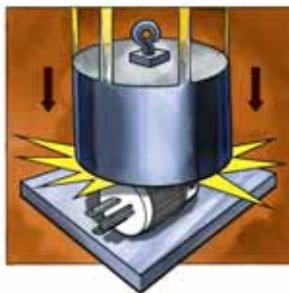

Leviton knows that in real industrial environments, plugs and connectors are crushed by forces exceeding 500 lbs. We perform the crush test with a force of 2500 lbs. to ensure that our devices withstand the really heavy hits on the job.

Impact Test

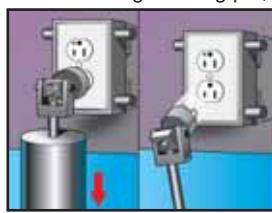

A wired plug or connector is subjected to impact from a 10 lb. weight repeatedly dropped from a height of 18 inches.

"There shall be no breakage, deformation or other effect that may interfere with the function of the device." Plugs and connectors are subjected to severe impacts in industrial settings. Therefore, Leviton exceeds the UL requirement by dropping the weight from a height of 36 inches.

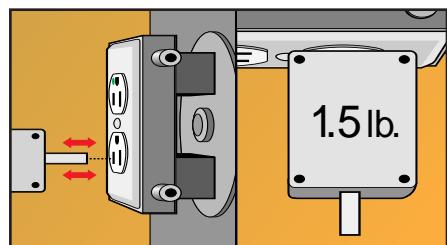

Abrupt Removal of Plug Test

A steel-bodied test plug with brass blades is inserted into the receptacle. A 10-pound weight dropped from at least 24 inches yanks the plug out of the receptacle. This test is done eight times with the receptacle rotated into different positions to create the greatest stress on its face and contact. After this, the grounding contact must retain a four ounce, 0.184" diameter grounding pin, with the receptacle face down, for one minute. There shall be no breakage of the receptacle that interferes with the receptacle function or the integrity of the enclosure. The receptacle shall maintain the grounding path integrity through the receptacle.

Power Blade Retention Test

A test plug with oversized blades of .075" is inserted into the current-carrying opening of the receptacle for 20 conditioning cycles. After the conditioning cycles, the contact shall be capable of supporting for one minute 1½ lbs. secured to a single .055" thick solid steel blade without holes.

Cord Pull Test

The cord must remain securely fastened after straight pulls of 30 pounds, and rotating pulls (in a 3-inch circle) of 10 pounds for two hours. "Displacement of conductors, insulation, and outer jacket of the flexible cord AWG 18 SVT shall not exceed 1/32 inch. There shall be no cuts, rips, or tears in cord insulation."

Heavy-duty cord stress is typical abuse for industrial plugs and connectors. Leviton increases the weight in the straight cord pull test to 175 lbs. with AWG 14 ST and in the rotating pull test to 20 lbs., ensuring positive strain relief under industrial conditions.

Mechanical Drop Test

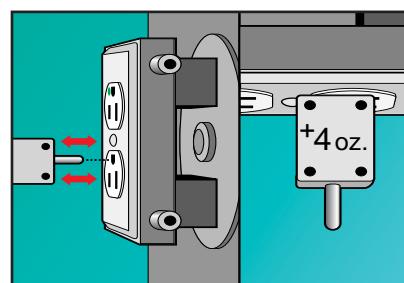

A sample wired plug or connector is suspended horizontally by its attached cord, and released so that it impacts a hard wood surface 45 inches below the point of suspension--repeated for 1300 cycles.

"There shall be no breakage, deformation, or other damage which would interfere with the functioning of the device."

Ground Pin Retention Test

The grounding contact of the receptacle is conditioned by 20 insertions with a .204" oversized pin. After conditioning, a 0.184" diameter pin shall be inserted in the grounding contact which shall be capable of supporting at least four ounces for one minute.

Assembly Security Test

A force of 100 pounds is applied through the slots to the base of the receptacle while the yoke is supported at its screw mounting positions. There must be no cracking of base or permanent deformation of yoke.

In addition...

Leviton Hospital Grade receptacles undergo these demanding tests:

- Strength of insulating base
- Ground contact temperature
- Impact test
- Ground Contact Resistance
- Terminal Strength Test
- Resistance of Ground
- Fault current
- Gripping
- Overload
- Temperature
- Dielectric withstand
- Insulation resistance
- Assembly security
- Receptacle ground contact
- Horsepower

† Suitable for 208V motor applications at HP rating. L-L Denotes phase-to-phase HP rating. L-N denotes phase-to-neutral rating.

74000 Series - For Industrial & Commercial Environments

Yellow indicator light will illuminate and audible alarm will sound when one of the fuses in the surge module opens due to surge activity. The percentage of protection in that module will flash on the screen (i.e., 75% protection when 1 fuse is open).

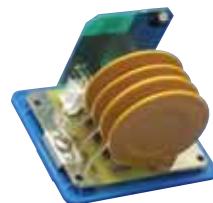

Red indicator light will illuminate and audible alarm will sound when protection level is at 50% or less.

Information is easily downloadable via RS-232 port using the program "Hyperterminal" (see instruction sheet for detailed instructions).

Arrow buttons allow user to view surge event history.

Green indicator lights illuminate when the panel status is OK. A fault condition is indicated when up to 3 indicators are no longer illuminated.

Large-diameter MOV's, 40mm on 74000 Series panels are individually thermal fused for over-current protection.

SPECIFICATIONS & FEATURES 74000 SERIES

- Provides Seven-Mode protection.
- User replaceable modules.
- Real-time diagnostics monitor power and suppression status for each mode.
- Surge magnitude, time, and date is provided for each surge event.
- AC Sine Wave Tracking.
- Optically isolated dry contacts.
- UL 1449 2.5 Edition.

ENVIRONMENTAL

STORAGE TEMPERATURE
-20°C to 85°C

OPERATING TEMPERATURE
-10°C to 60°C

STANDARDS & CERTIFICATIONS

ANSI/IEEE Categories A, B, & C
C-62.41 & C-62.45
UL 1449
#E146315
CSA
#LR-94773

Diagnostic Capabilities:

- Monitors the status of each phase.
- Display will indicate "Fault", "Alert", and "Protection" status.
- Functions include a surge event counter, amplitude measurement, date and time stamping of the event.
- Events are stored and are recallable and downloadable by the user.

Replacement Modules for Superior Protection

The heart of the Cat. No. 57000 group is the powerful Replacement Module equipped with extremely effective hybrid multi-component suppression circuitry. Six different module variants are available to suit a range of commonly available North American AC line-voltage configurations.

Leviton Safety Seminars

**Learn to recognize potential safety hazards
BEFORE they become pitfalls!**

Request an On-site Safety Learning Lab Seminar.

Learn about:

- Arc Flash and PPE
- OR –
- GFCI Cordsets, Temporary Power Boxes, and Open Neutral Protection

Save Money with a Dollars & Sensors® Energy Savings Audit

Identify your energy savings potential with occupancy sensors.

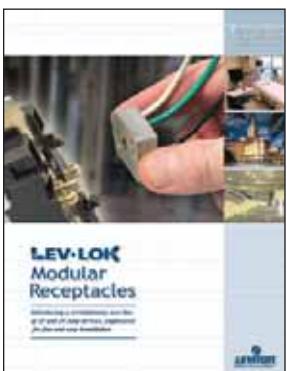

Leviton's software helps you determine which occupancy sensors should go where in your facility, calculates your potential energy savings, and produces a dollars and cents snapshot of your energy savings and installation ROI.

Schedule a Safety Seminar or Energy Conservation Audit Today!

... WHAT'S NEW... WHAT'S NEW... WHAT'S NEW... WHAT'S NEW... WHAT'S NEW...

Lev-Lok™ Modular Receptacle System Designed with the Busy Contractor in Mind

- Consists of wiring module (locking connector and leads) and rugged duplex receptacle with solid brass locking connection pins
- Lock and latch wiring module simplifies large wiring device jobs while delivering the most secure connection
- Streamlines installation process and reduces installation costs

Simple... Easy... Secure...

Industrial Grade Switches For Harsh Processing Environments or High Traffic Areas

- PowerSwitch® Manual Motor Starting Switches for the most demanding manufacturing environments
- PowerSwitch® Enclosed Safety Disconnect Switches provide the utmost in protection, durability, performance and standards compliance
- LevSpec® Industrial Grade AC Toggle Switches feature a full line of maintained, momentary and key-locking versions for a wide range of applications

LOCKING DEVICES & WIRE MANAGEMENT

1. Locking Plugs & Connectors – Black & White™

- 15, 20 & 30 Amp
- 125V thru 600V
- 2-P 3-W thru 4-P 5-W
- 40 NEMA Configurations
- 19 Non-NEMA Configurations
- UL/Fed.Spec./CSA/NOM
- Solid Brass Blades (Locking Plugs)
- One-Piece Brass Contacts (Locking Connectors)
- Nylon Construction

2. V-0-MAX™ Locking Receptacles

- 15, 20 & 30 Amp
- 125V thru 600V
- 2-P 3-W thru 4-P 5-W
- 40 NEMA Configurations
- 19 Non-NEMA Configurations
- UL/Fed.Spec./CSA/NOM
- UL V-0 Flammability Rating
- Color-Coding Indicates Voltage Ratings

3. Flanged Inlets/Outlets

- 15, 20 & 30 Amp
- 125V thru 600V
- 2-P 3-W thru 4-P 5-W
- 40 NEMA Configurations
- 14 Non-NEMA Configurations
- UL/Fed.Spec./CSA/NOM
- Positive Crimp Lock Wire Clamps
- Nylon Construction

4. miniLOCK™ Midget Devices

- 15 Amp
- 125V thru 250V
- 2-P 3-W thru 3-P 3-W
- 3 NEMA Configurations
- UL/Fed.Spec./CSA/NOM
- Nylon Construction
- Plugs, Connectors, Receptacles & Inlets

5. Wire Mesh Grips

- Pulling, Support, & Strain Relief
- Single & Double Eyes
- Flexible, Offset & Rotating Eyes
- Closed, Split Lace, or Split Rod Mesh
- Liquid Tight, Wide Range, Deluxe Grips

WATERTIGHT DEVICES

1. Wetguard® Watertight Devices

- 15, 20 and 30 Amp
- 125V thru 600V
- 2-P 3-W thru 4-P 5-W
- 22 NEMA Configurations
- 4 Non-NEMA Configurations
- UL/Fed. Spec./CSA/NOM
- EPTR Construction
- All Configs Available in High-Visibility Yellow
- Selected Configurations Available in Black

2. Wetguard Watertight Accessories

- Watertight Flip Lids with Lockout/Tagout
 - High Visibility Yellow & Black
 - SS Hinge & Screws
- Flexible, Watertight Plug Caps
- Reinforced Thermoplastic FD Boxes: 1/2", 3/4", & 1" Knockouts

3. IEC 309 Pin & Sleeve

- 20 to 100 Amp, IP67 Watertight
 - Plugs & Connectors
 - Receptacles & Inlets
- 20 to 100 Amp Switches
 - Mechanical Interlock
 - Non-Fused & Fused
- Valox® PBT Back Boxes
- Replacement Components
- UL/CSA

SINGLE POLE / SINGLE PIN DEVICES

1. 15 Series – Taper Nose

- Up to 125 Amp, 600V
- Insulator – Shatterproof and Crack Proof
- Slit and Cam Male Contact Design – Compensates for Wear
- Color-Coded Insulators for Easy Phase Identification
- UL Listed (Set Screw Version Only)

2. 16 & 18 Series – Taper Nose and Ball Nose

- Up to 400 Amp, 600 V
- Insulator – Shatterproof and Crack Proof
- Slit and Cam Male Contact Design – Compensates for Wear
- Color-Coded Insulators for Easy Phase Identification
- UL Listed and CSA Certified (Double Set Screw Version Only)

INDUSTRIAL GRADE SWITCHES

1. Heavy Duty AC Control with Toggle Actuator

- 15, 20 & 30 Amp
- 120/277V AC
- SP, DP 3-Way, 4-Way
- UL/Fed. Spec./CSA
- Single-Piece Integrated Grounding System
- Back or Side Wired Grounding Terminal

2. Key Lock AC Control with Key Lock Actuator

- 20 Amp
- 120/277V AC
- SP, DP 3-Way, 4-Way
- Key Removable in ON or OFF Positions
- UL/CSA/NOM
- Performs to Fed. Spec. Standards

3. Motor Starter Switches - AC Control for Single-Phase or Three-Phase Motor Loads

- 30, 40 & 60 Amp
- 120V AC thru 600V AC
- Max HP Rating: 20HP 600V AC
- Available as Open Switch or with NEMA/Type 1 or 3R Enclosure
- cUL/NOM

3. Safety Disconnect Switches

AC Control For Horsepower Rated Motor Loads

- 30, 60 & 100 Amp
- Heavy Duty 600V AC
- Max HP Rating: 50HP 600V AC
- Fused and Non-Fused
- Dust-tight and Watertight
- IP67, IP65, NEMA 3R, 4X, 12K

ENERGY CONSERVATION & COMMUNICATIONS DEVICES

1. Occupancy Sensor AC Control with Automatic Switching

- Incandescent, Low Voltage, Motor Loads
- Fluorescent (Magnetic or Electronic Ballast)
- 120/277V AC • SP, 3-Way
- UL/CSA/NOM
- Decora® Style Wall Switch Design
- Ceiling Mount & High Bay Available
- Available with Title 24 Compliance
- Ultrasonic, PIR, or Multi-Tech

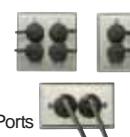

2. Communication Modules 3803 Series

- Hard Wired • CE Approved
- 2 Options for Ground Connection
- For Use on Allen Bradley & 4-20 ma
- Protects Programmable Logic Devices from Surges in Harsh Electromagnetic or Geographic Areas

3. DuraPort™ Industrial Connectivity

- IP67 Watertight Seal
- Outlets, Wallplates, & Patch Cords
- Compatible with QuickPort jacks including 5e+ & 6+
- Captive Dust Cap Protects Unused Ports
- SS Gasketed Watertight Wallplate

STRAIGHT BLADE DEVICES

1. Power Indication Receptacles

- 15-20 Amp Configurations
- 100,000 Hr. Power Status Indicator
- Nickel-Plated Brass Strap with Integral Ground Contacts
- Back & Side Wired Termination
- Hospital Grade with Permanent "Green Dot" Lens

2. Surge Protection Receptacles

- 15-20 Amp Duplex, Single and 4-in-1 Configurations
- UL Listed to 1449 and 498 Standards
- Decora® Style Nylon Face
- Surge with IG Versions
- Protection Indicator Light & Audible Damage Alarm

3. SmartLockPRO® GFCI

- 15-20 Amp Configurations
- Back & Side Wired
- LED Status Indicator
- Meets New UL GFCI Requirements, Effective 2006
- Prevents Reset If Protective Function Is Compromised
- Prevents Reset in Case of Line Load Reverse Wiring

4. DIN Rail Mounted Receptacles

- Surge Protection
- Standard Industrial Grade
- Hospital Grade
- GFCI Receptacle
- 15A, 120V
- Straight Blade
- Duplex Receptacle

5. Python® Industrial/OEM/ Commercial Connections

- Nylon Single-Piece Body
- 15-20 Amp Straight & Angle Versions
- Removable Wide Range Cord Inset
- Enclosed Wiring Module
- Triple-Combo Screws

6. Black & White™ Power Indication Industrial Connections

- Green Light Glows When Energized
- 125V, 250V, & 277V
- 15, 20, 30 Amp Plugs & Connectors
- Super Tough Nylon Body
- Triple-Combo Screws
- Catalog & NEMA Numbers Printed on Cord Clamp
